

COMPONENT	OBJECTIVES	COMPETENCY
<p>I Science Skills and Attitudes, Applications, and Contexts of Physics</p>	<ol style="list-style-type: none"> <li>1. Use careful observations and exploratory activities to identify variables and to develop problem statements. (SC.H.1.4.1)</li> <li>2. Distinguish among descriptive (laboratory and field observations), comparative (comparing two experiments with one common manipulated variable), and experimental (controlled experiment) investigation designs commonly used in physics. (SC.H.1.4.1) (SC.H.3.4.1)</li> <li>3. Write hypotheses leading to different types of experimental designs for selected problem statements using variables identified as manipulated (independent) and responding (dependent). (SC.H.1.4.0)</li> <li>4. Routinely analyze experiments in terms of: problem statement, hypothesis, manipulated and responding variables, quantification of variables, identification of variables held constant, the number of tests and trials, and the use of an experimental control. (SC.H.2.4.2)</li> <li>5. Based upon an appropriate number of experimental trials and samples, systematically collect and organize data into tables or charts and properly distinguish among the types of qualitative (nominal and ordinal) and quantitative (interval and ratio) data analyzed. (SC.H.1.4.0)</li> <li>6. Interpret experimental data by reordering and/or plotting graphs and then describing the central tendency of the data by the appropriate use of the mean, median, and/or mode and the variation of the data by the appropriate use of the range and/or the frequency distribution. (SC.H.1.4.0)</li> <li>7. Write conclusions that cover the following seven points: state what was investigated; describe whether or not the hypothesis was supported by the results; include sample results; compare the results with other investigations; provide possible explanations about the results; recommend additional studies; and discuss possible applications. (SC.H.1.4.3)</li> </ol>	<p>A. Apply science investigation skills to design and carry out appropriate types of experiments and to analyze the data collected to form conclusions on physics topics using established laboratory and safety procedures.</p>

COMPONENT	OBJECTIVES	COMPETENCY
	<p>8. Analyze conclusions by classifying each sentence as a statement based upon either: an observation, the result of information gathered through the senses; an inference, the explanation or interpretation of observations; a fact, the activities performed during the investigation; or an opinion, inferences not directly supported by observations. (SC.H.1.4.7)</p> <p>9. Identify the parts, functions, proper care, and use of appropriate scientific equipment, i.e., balances, and demonstrate accurate metric measurement by reading common laboratory apparatus to the nearest tenth of a unit of measure and describing the uncertainty of these measures. (SC.H.1.4.0)</p> <p>10. Select attire (aprons, eye protection, containment of hair, clothes) to ensure personal protection and practice accepted safety procedures using appropriate science equipment for all science activities. (SC.H.1.4.0)</p> <p>11. Identify appropriate safety procedures for typical laboratory emergencies such as broken glass, chemical spills, chemical splashes on the skin or in the eye, and the prevention of fires. (SC.H.1.4.0)</p> <p>1. Describe how discoveries made by physicists can have both beneficial and detrimental affects on the quality of human life. (SC.G.2.4.6)</p> <p>2. Identify how technology and conservation have affected the rate of consumption of our common natural renewable and nonrenewable resources. (SC.G.2.4.5) (SC.G.2.4.6)</p> <p>3. Explore research and career opportunities in physics. (SC.H.3.4.6)</p>	<p>B. Apply physics knowledge, principles and skills to clarify and make decisions involving critical social issues.</p>

COMPONENT	OBJECTIVES	COMPETENCY
<p>II Kinematics</p>	<p>4. Identify and describe the scientific contributions of physics researchers from various ethnic and cultural backgrounds and recognize the importance of the continuous development and sharing of scientific information. (SC.H.1.4.5)</p> <p>5. Determine that results are tentative, are subject to different interpretations, and should be replicable by other scientists. (SC.H.1.4.4) (SC.H.1.4.5) (SC.H.1.4.6) (SC.H.1.4.7)</p> <p>1. Based upon laboratory experiences, calculate average speed, instantaneous speed, and change in speed, given appropriate distance and time data. (SC.C.1.4.2)</p> <p>2. Represent linear motion by use of displacement/time, velocity/time, and acceleration/time graphs. (SC.C.1.4.0)</p> <p>3. Determine approximate instantaneous speed and/or acceleration from the slope on appropriate graphs. (SC.C.1.4.0)</p> <p>4. Recognize examples of different frames of reference. (SC.C.1.4.1)</p>	<p>A. Experimentally investigate linear motion to determine if the velocity is constant, increasing, or decreasing when the acceleration is zero and when it is constant.</p>

COMPONENT	OBJECTIVES	COMPETENCY
<p>III Dynamics and Forces</p>	<ol style="list-style-type: none"> <li>1. Define a vector quantity as one which requires both a magnitude and a direction measurement. (SC.C.2.4.0)</li> <li>2. Determine the resultant of two component vectors. (SC.C.2.4.0)</li> <li>3. Resolve a vector diagram into its x and y components. (SC.C.2.4.0)</li> <li>4. Identify velocity acceleration, and displacement as vector quantities. (SC.C.2.4.2)</li> <li>5. Investigate how acceleration varies with the force that causes it and the mass of the object accelerated, generate plots of acceleration versus force and acceleration versus mass, and combine these two relationships into one proportional statement. (SC.C.1.4.2)</li> <li>6. Solve problems which require the use of Newton's Laws of Motion. (SC.C.2.4.0)</li> <li>7. Quantitatively apply Newton's laws to analysis of velocity-dependent forces such as the resistance of a fluid to a falling object's motion. (SC.C.2.4.0)</li> <li>8. Describe those properties which affect friction. (SC.C.2.4.0)</li> <li>9. Describe how most observable forces can be traced to electric forces acting between atoms or molecules. (SC.C.2.4.5)</li> <li>10. Calculate the magnitude, and direction of force, or torque that must be applied to achieve equilibrium in an unbalanced system. (SC.C.2.4.0)</li> <li>11. Calculate the gravitational force between two objects given their mass and the distance between their centers. (SC.C.2.4.1)</li> </ol>	<p>A. Quantitatively apply Newton's laws to the analysis of balanced and unbalanced forces acting on an object in one and two dimensions.</p>

COMPONENT	OBJECTIVES	COMPETENCY
<p>IV Conservation of Momentum and Mechanical Energy</p>	<p>12. Qualitatively describe a projectile's motion in terms of its vertical and horizontal components of velocity and quantitatively at the initial, midpoint, and the final point of the trajectory. (SC.C.2.4.0)</p> <p>1. Investigate the factors effecting the period of an object moving in periodic motion. (SC.C.2.4.0)</p> <p>2. Describe the relationship between the restoring force and the displacement on an object moving in simple harmonic motion. (SC.C.2.4.0)</p> <p>3. Based on experimental data calculate the magnitudes of velocity, force, and acceleration vectors in uniform circular motion. (SC.C.2.4.0)</p> <p>1. Use Newton's laws to show how they guarantee the conservation of momentum in any two-body collision. (SC.B.2.4.1)</p> <p>2. Quantitatively describe the conservation of momentum in the following types of collisions: (1) One-dimensional, totally inelastic; (2) One-dimensional, elastic; (3) Two-dimensional, inelastic; (4) Two-dimensional, elastic. (SC.B.2.4.1)</p>	<p>B. Apply Newton's laws to the analysis of objects moving periodically.</p> <p>A. Experimentally investigate the conservation of momentum for one-dimensional and two dimensional elastic and inelastic collisions.</p>

COMPONENT	OBJECTIVES	COMPETENCY
<p>VI Waves</p>	<ol style="list-style-type: none"> <li>5. Apply the Second Law of Thermodynamics to practical situations. (SC.B.1.4.6) (SC.B.1.4.7)</li> <li>6. Calculate the specific heat of a substance. (SC.B.1.4.2)</li> <li>7. Solve problems using Charles' Law and Boyle's Law. (SC.B.1.4.2)</li> </ol> <ol style="list-style-type: none"> <li>1. Quantitatively state the relationship between the frequency of a wave and the period of a wave. (SC.A.2.4.6)</li> <li>2. Explain the necessity of a supporting medium to transmit mechanical waves. (SC.A.2.4.6)</li> <li>3. Demonstrate the behaviors of transverse and longitudinal waves, as well as calculate wave length, frequency, and period. (SC.A.2.4.6)</li> <li>4. Identify the nodal and antinodal lines produced by the interference of sound waves and light waves. (SC.A.2.4.6)</li> </ol> <ol style="list-style-type: none"> <li>1. Identify similarities and differences between theories of light propagation. (SC.A.2.4.6)</li> <li>2. Recognize patterns resulting from various diffraction gratings. (SC.A.2.4.6)</li> <li>3. Describe the contributions of Roemer, Michaelson, Morley, and Huygens to our understanding of the nature and speed of light. (SC.A.2.4.6)</li> </ol>	<p>A. Demonstrate the behaviors of transverse and longitudinal mechanical waves, and make appropriate calculations of wavelength, frequency, and period.</p> <p>B. Compare and contrast the two light theories, electromagnetic wave and the photon theory, using wave behaviors and apply these behaviors to the functions of mirrors and lenses.</p>

COMPONENT	OBJECTIVES	COMPETENCY
VII Nuclear Energy	<ol style="list-style-type: none"> <li>4. Diagram light reflecting off a plane, concave, or convex mirror, showing the focal point and the location and orientation of the images, when given the location and orientation of the object. (SC.A.2.4.6)</li> <li>5. Diagram light passing through concave or convex lenses, lenses showing the focal point and the location and orientation of the image, when given the location, and orientation of the object. (SC.A.2.4.6)</li> <li>6. Identify, apply, and calculate factors in refraction of light, including indexes of refraction. (SC.A.2.4.6)</li> <li>1. Distinguish among production, propagation, reception, detection, and characteristics of sound. (SC.A.2.4.6)</li> <li>2. Use sound to demonstrate such properties of waves as reflection, diffraction, and interference. (SC.A.2.4.6)</li> <li>3. Identify wave phenomena of sound such as frequency, loudness, and overtones in practical settings. (SC.A.2.4.6)</li> <li>1. Write equations that illustrate that a number of elements have heavier, unstable nuclei that decay, spontaneously giving off smaller particles and waves that result in a small loss of mass and release a large amount of energy. (SC.A.2.4.3)</li> <li>2. Demonstrate an understanding of measuring various forms of nuclear radiation. (SC.A.2.4.3) (SC.A.2.4.4) (SC.C.2.4.4)</li> </ol>	<ol style="list-style-type: none"> <li>C. Explain the nature and transmission of sound through different mediums, the effects of interference, and the implications of the Doppler effect in practical situations.</li> <li>A. Write balanced nuclear equations for the decay of unstable isotopes, then quantitatively apply the concept of half life to the products of these reactions.</li> </ol>

COMPONENT	OBJECTIVES	COMPETENCY
VIII Electricity	<ol style="list-style-type: none"> <li>3. Give examples of technological uses of radioactive materials. (SC.A.2.4.3) (SC.B.1.4.5) (SC.E.2.4.6)</li> <li>4. Solve problems in radioactive decay using half-life data. (SC.A.2.4.3)</li> <li>1. Compare fission and fusion in terms of the initial particles, final products, and relative energy released. (SC.A.2.4.3) (SC.A.2.4.4) (SC.C.2.4.4)</li> <li>2. Balance nuclear transmutation equations. (SC.A.2.4.3)</li> <li>3. Describe nuclear energy sources. (SC.A.2.4.3) (SC.A.2.4.4)</li> <li>4. Identify applications of nuclear reactions, including power generations. (SC.A.2.4.3) (SC.A.2.4.4) (SC.B.1.4.5) (SC.C.E.2.4.6)</li> <li>1. Calculate the force between two spherical charges using Coulomb's Law when given the value of their charges and the distance between their centers. (SC.C.2.4.2)</li> <li>2. Describe basic characteristics of static electricity. (SC.C.2.4.2)</li> <li>1. Demonstrate a knowledge of current electricity by diagramming a complete circuit and identifying all its components (SC.C.2.4.2)</li> <li>2. Define the motions of electrical charges in terms of electric current. (SC.C.2.4.2)</li> </ol>	<ol style="list-style-type: none"> <li>B. Analyze the energy of fission and fusion in terms of mass deficit and discuss the implications of these issues to nuclear waste, energy and medicine.</li> <li>A. Predict the outcome of the interactions between static point charges using Coulomb's Law.</li> <li>B. Design a series/parallel circuit with three or more resistors and one power source and predict the total current through the various branches and the voltage at various junctions. Confirm these predictions using a voltmeter and an ammeter.</li> </ol>

COMPONENT	OBJECTIVES	COMPETENCY
IX Magnetism	<ol style="list-style-type: none"> <li>3. Use Ohm's Law to calculate the unknown variable (voltage, current, or resistance) when given the other two. (SC.C.2.4.2)</li> <li>4. Calculate the total resistance of elementary parallel or series circuits containing resistors. (SC.C.2.4.2)</li> <li>5. Calculate the work done in transferring a given charge through a given potential difference. (SC.C.2.4.2)</li> <li>6. Investigate the relationship between the heat developed, the current through, and the resistance of the conductor over a specified time period. (SC.B.1.4.6) (SC.C.2.4.2)</li> </ol> <ol style="list-style-type: none"> <li>1. Diagram the field around a magnet. (SC.C.2.4.3)</li> <li>2. Demonstrate the existence of a magnetic field around a moving electric charge. (SC.C.2.4.3)</li> <li>3. Recognize the relationship between alternating and direct current. (SC.C.2.4.3)</li> <li>4. Demonstrate the existence of a magnetic field around a moving charge using the magnetic force on a compass needle. (SC.C.2.4.3)</li> <li>5. Describe the domain theory of magnetism. (SC.C.2.4.3)</li> </ol>	<p>A. Experimentally demonstrate the effects of magnetic forces on moving charges and on currents using an ammeters and voltmeter.</p>
